

## Oride Midel

$$\frac{d\vec{p}}{dt} = -\vec{p} + \vec{F}$$

$$\frac{7}{V_{\text{ovg}}} = -\frac{1}{2} = \frac{7}{12} = \frac{7}{12}$$

$$\vec{J}$$
 =  $ne \vec{v}_{org} = ne^2 \uparrow \vec{E} = \vec{T} \vec{E} = \vec{E}$ 

$$\Upsilon = \begin{pmatrix} 0.22 \\ \rho_M \end{pmatrix} \left( \frac{r_s}{\alpha_0} \right)^3 \times 10^{-14} \text{ s}$$

$$\frac{d\vec{p}}{dt} = \vec{p} - \vec{p}(t)$$

$$\frac{m}{dt} = -e \overrightarrow{E} \qquad , \overrightarrow{J} = -e n_s \overrightarrow{V}_s$$

$$m d \left(+\frac{2}{J}\right) = +e^{\frac{2}{L}}$$

$$\vec{E} = M d\vec{J}$$

$$Nse^2 dt$$

$$\nabla x \vec{E} = - 1 \partial \vec{B}$$

$$C \partial t$$

$$\frac{m}{n_s e^2} \left( \frac{7 \times 3\vec{j}}{3t} \right) + \frac{1}{c} \frac{3\vec{k}}{3t} = 0$$

$$\frac{\partial}{\partial t} \left( (\nabla x \vec{J}) + n_s e^2 \vec{B} \right) = 0$$

Maxwell Eq (Footnote 30 pg. 738)

$$\nabla \times \vec{B} = 4\pi \vec{J}$$

London: 
$$\nabla \times \vec{J} = -nse^2 \vec{B}$$

Mc

$$\nabla \times \left[ \nabla \times \frac{c}{4\pi B} \right] = -n_{S}e^{2} B$$

$$\nabla (\nabla \cdot \frac{c}{4\pi B}) + \nabla^{2}B = +n_{S}e^{2} B$$

$$mc$$

$$\nabla^{2}B - 4\pi n_{S}e^{2} B = D$$

$$mc^{2}$$

$$\nabla^{2}J = 4\pi n_{S}e^{2} B^{2}$$

$$mc^{2}$$

$$\nabla^2 J = 4\pi n_s e^2 B^2$$

For 
$$10 \rightarrow B = B_0 e^{-1/2}$$

$$= \left(\frac{4\pi n_0 e^2}{mc^2}\right)^{-1/2}$$

$$\lambda = 41.9 \left(\frac{\Gamma_s}{a_0}\right)^{3/2} \left(\frac{n}{n_s}\right)^2 A$$

G-L formation 
$$\Upsilon(\vec{r})$$
 is order parameter

if not  $SC$   $\Upsilon = 6$ 

if  $raq$ , field  $\pm 0$  add  $\frac{1}{2} | 1 \nabla^2 + 2eA^2 |^2$
